PERMISSION TO DISTRIBUTE TRANSCRIPT DATA
THROUGH TALKBANK
Carnegie Mellon University

Carnegie Mellon University is participating in a data-sharing program known as TalkBank that was established through federal and foundation grants. For the program to function properly, contributors will be asked to and will give permission for their work to be made available to other researchers. With a full understanding of the aforementioned, I hereby give permission to Brian MacWhinney, Director of the Center of the Child Language Data Exchange System at Carnegie Mellon University, to make and circulate electronic copies of the language transcripts and media that I describe below. These copies may be distributed to scholars and other responsible parties. I warrant that this use of the data is in accord with Human Subjects review procedures at my institution and that participants have given informed consent to have their data available to researchers. I also warrant that there is no copyright restriction over the transcripts and media being circulated. Any further restrictions that I wish to place on the use of these data are listed under (2) below. I do not hold Brian MacWhinney or Carnegie Mellon responsible for the enforcement of these further restrictions and indemnify and render harmless both Brian MacWhinney and Carnegie Mellon University against any actions at law or in equity or in similar courts of any jurisdictions arising from violations of these restrictions.

1. General description of the data set, and IRB Approval # (if available):

The data shows participant pairs playing the barrier game. There are two groups of participant pairs: 1) a person who stutters with their partner (who does not stutter), and 2) person who does not stutter with their partner who also does not stutter. There are a total of five participant pairs in each group. During the barrier game, a low barrier was placed between partners, with a numbered board (1 to 12) placed in front of each partner. At the start of each trial, one participant had twelve cards placed in a specific order (by the researcher) on the numbered board, while the other partner was given the identical cards randomly ordered in a stack. During the game, partners had to work together to ensure identical placement of cards on the both boards.The data set was collected at the University of Illinois at Urbana-Champaign (IRB Approval #12011).

2. Restrictions to be placed on the use of the data:

The data has yet to be published, accordingly, I would like to request a hold on it.
