

**PERMISSION TO DISTRIBUTE TRANSCRIPT DATA
THROUGH TALKBANK
Carnegie Mellon University**

Carnegie Mellon University is participating in a data-sharing program known as TalkBank that was established through federal and foundation grants to Brian MacWhinney at Carnegie Mellon. For the program to function properly, contributors will be asked to and will give permission for their work to be made available to other researchers. With a full understanding of the aforementioned, I hereby give permission to TalkBank to make and circulate electronic copies of the language transcripts and media that I describe below. These copies may be distributed to scholars and other responsible parties. I warrant that this use of the data is in accord with Human Subjects review procedures at my institution and that participants have given informed consent to have their data available to researchers. I also warrant that there is no copyright restriction over the transcripts and media being circulated. Any further restrictions that I wish to place on the use of these data are listed under (2) below. I do not hold Brian MacWhinney or Carnegie Mellon responsible for the enforcement of these further restrictions and indemnify and render harmless both Brian MacWhinney and Carnegie Mellon University against any actions at law or in equity or in similar courts of any jurisdictions arising from violations of these restrictions.

1. General description of the data set, and IRB Approval # (if available):

Correia, Costa & Freitas (2010) contains data from 5 European Portuguese monolingual children during 135 recording sessions. The children's speech was recorded every other week in the case of João and Luma, and monthly in the case of Inês, Clara and Joana. The data were recorded at the children's homes, during spontaneous speech. The mother and/or caretaker and the researcher were present during the recording sessions.

All of the specific research questions formulated in Costa (2010) were related to the development of segmental properties (place and manner features) in Portuguese children. The research questions underlying Correia (2010) deal with the identification of and order of acquisition for primary word stress and the study of the early shape of prosodic words in Portuguese children.

IRB:

2. Restrictions to be placed on the use of the data:

None.
